Tools and challenges in time-resolved structural biology

Recent advances in detectors, sources and sample delivery methods have opened the door to a new era of time-resolved structural studies. However, challenges of how to apply these methods to all macromolecular systems and how to appropriately analyse and interpret the data obtained remain. I will present the current state of the art, and describe some of the current open challenges in the field.

Prof. Dr. Arwen Pearson
Center for Free-Electron Laser Science (CFEL)
Hamburg Center for Ultrafast Imaging (CUI)
Universität Hamburg

Everyone is welcome!
